Abstract. The millennial generation includes all who are born in the era between the years 1981 to 2003. The millennial generation or the generation Y are flexible people, preferring freedom and appreciate personal features. The millennial era is marked by the ease with which children often get information from various technological media because of the rapid technological development. This development can provide positive things for the mindset of the millennial children but also have a negative impact. Children of the millennial think in simple terms and dislike sophistication. The influence of technological developments in the millennium era is that the mindset of children of the age are open and more critical, like to compete and tend to highlight the advantages of his personality. Millennial children like to work with high creativity and time efficiency, producing maximum work. Evaluation for Children in the millennium age needs parents to be role models in their minds. Very child is an imitator. What see in their parents and who can get the technology/internet standards will influence their thinking.

Keywords: Mindset, Evaluation, Millennial

1 Introduction

Generational dimensions are attributed to the transition from 1990. Their absence from public life has been much affected by technological influences in their lives. Every aspect of many people uses computer and internet technology and for everyday needs, for example, shopping online, even online businesses to apply for jobs already online. The generation of employees is still labored but is bound to bond with the place. They even can work while traveling.

Characteristics of intelligence are having an open minded mind, but thinking and attending to new things that are viral at this time. The potential for innovation is to highlight the advantages that it possesses in favor of photography, selfie, disseminating the existing situation in the community through social media.

2 Research Methods

The study used a qualitative approach with an interview method face to face to the sources interviewed. This approach is carried out after the process is deeper into the mindset so that the writers evaluate it as far back as their political minds.

3 Evaluation Of Mileneal Children's Pattern

The millennial generation or often called Y generation is the first generation to spend the entire life of the digital environment, which has implications for how people live and work (Bennett et al, 2008, Wessner&Miller, 2008). According to the study, the millennial generation is the greatest generation (Howe & Strauss, 2000: 51), but there is also a mention of the prevalence of young people who indulge in the prevalence of protection from overload that cannot overcome the usual work without guidelines (Hershatter&Eppstein, 2010).

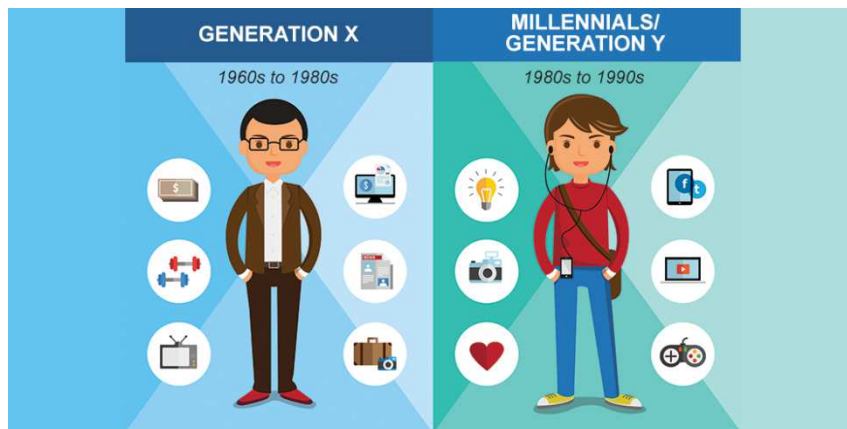

Fig. 1. Comparison of X Generation and Generation Y

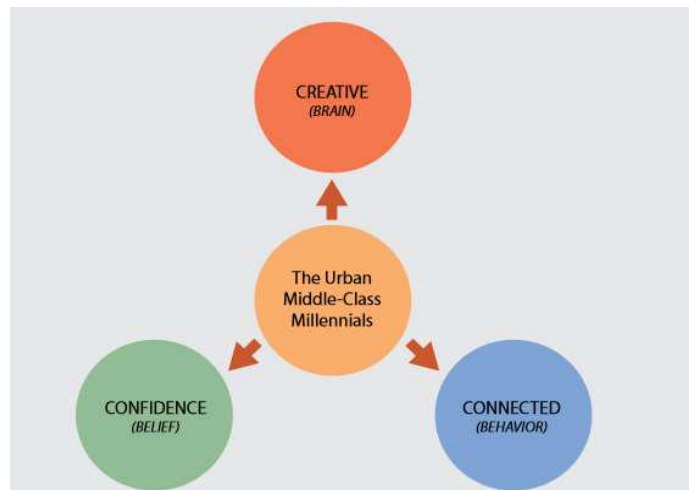

Fig. 2.

Creative: Millennials is a person who is rich in ideas and communicating the ideas. Millennials are a creative generation. One proof that shows is the growth of startups and other creativities

Connected: Millennials are socially skilled individuals in the community. They are also active in surfing on social media and the internet. They are very good at using Facebook, Twitter, paths, other Instagram or social media platforms. Social media and internet have arrived at needs. **Confidence:** they are people who are very self-conscious, dare to express their opinions and do not hesitate to debate the public.

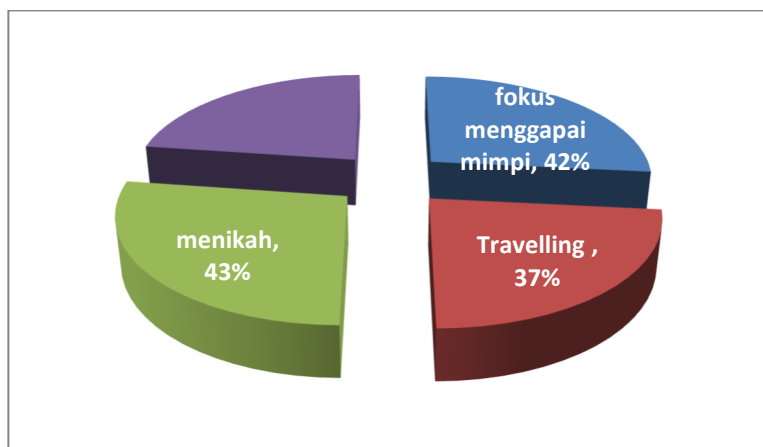

Fig. 3. The Millennial Age Mind Pattern: LIFE PRIORITY

Through the source of the media and sources from the person interviewed, the teacher sees that the age of the millennial is more open to ideas or new thoughts, tends to be risk takers, and prioritizes togetherness.

4 Conclusion

Parents must be role models for the young minds, by listening to and thinking of the thoughts they express. The way the approach is to listen is good, and try to follow their thoughts. When they convey their thoughts about parents as parents combine their way of thinking with the values of life and Christianity. Parents should be a friend and a place for them to ask, because the young people's minds are influenced by their parents and lessen their reliance of the internet. What is less important teaching compared to showing them concrete results in the lives of the surrounding communities in families, neighborhoods, schools, the environment. The risks they take are those that choose the wrong things for their families. In other words, the role of the powerful person influences the influence of the millennial era. When they choose electives as parents, they must accompany them as friends, so that the position of parents is assisted by the advances in technology that they perceive from their problems. Parents should also improve their way of thinking of the present technological advancement and also the balance of technology thinkers, the thought of parents who are not lagging behind, the teacher of religion which introduces the values of life adopted by the parents up to the age of the young men, because of the necessity for good communication of relations.
