

or underground. This work opens a novel trend of optimisation for the modern industry generation, IIoT. As a result, there are many issues and future works to study and necessarily call for novel solutions in the realtime optimisation for IIoTs.

Acknowledgement

This work was supported in part by the Global Challenges Research Fund under the DfE-GCRF 2020-2021 scheme between Queen's University Belfast, UK and Dong Nai University, Vietnam.
