Abstract. During the pandemic, COVID-19 affected all aspects of life, one of which was affected was the field of education. With large-scale social restrictions causing all academic activities to be hampered. Learning activities must continue to run during this pandemic, the effort being made is to do distance learning or electronic learning, which is better known as e-learning. Technology for education that plays an important role in dealing with this pandemic is the learning management system as a form of learning methods in the COVID-19 pandemic. In this study distance learning in the COVID-19 pandemic with the comparison of Zoom and Webex can be relevant to the concept of applying learning methods in the face of a pandemic, which aims to provide convenience in the use of technology for education. The results of this study are to provide an understanding of learning methods that can be applied in learning activities as an effort to deal with the COVID-19 pandemic that can be used by schools in Indonesia, by knowing the comparison is expected to provide convenience in using Zoom and Webex in distance learning at this time.

Keywords: Learning Management System, Learning Media, E-Learning, Video Conference

1 Introduction

The development of technology can provide new methods in learning activities, this is certainly related to the place or process of teaching and learning for students and teachers. Learning media as a means of delivering learning material. During the COVID-19 pandemic [1]–[3], the learning activities could not be carried out as usual because academic activities in schools could lead to wider dissemination, the application of large-scale social restrictions required learning activities to be carried out at home, this transition could not be avoided by anyone so readiness was needed to adjust to the pandemic period of COVID-19. Information and communication technology (ICT) renders a technological solution to these practical difficulties [4] e-learning is a media developed for educational institutions, which aims to support online learning. This makes it easy for teachers to use technology as a support for learning activities that are specific so that learning can take place well even though it is done remotely. Students can utilize technology for learning activities, so it is more efficient to

use electronic learning which is used as a source of learning activities, as a means of delivering and evaluating material.

The LMS on which we increasingly rely as a means of learning have a considerable potential in the construction of knowledge and competence development [5]. E-learning has expanded rapidly with a variety of technologies and devices to access learning resources, such as laptops, computers, smartphones, and tablets. Technology has profoundly impacted education and learning and teaching methods [6]. Through e-learning, the process of learning activities undertaken can take place remotely without having to face-to-face in the classroom. E-learning content providers must attract learners with appropriate e-learning content and they have to adequately incorporate e-learning services and technologies in the e-learning process [7]. With the development of technology and the availability of the internet, this electronic learning system can be implemented well as a better potential in learning activities during the COVID-19 pandemic. E-learning provides features that can be used in learning activities that are already available to teachers and students. Students can access and use interactively the various sources of information available to them anywhere, anytime.

Learning activities can be carried out using video conferencing applications such as Zoom and Webex, from these applications that can facilitate learning activities that can optimize the process of understanding and delivering material. This learning method is an effective way to deliver learning material, learning concepts that prioritize ease of access to place and time. The functions offered for each application and also the interface provided for each application have different functions, so that compatibility can be used as needed. To do activities and other activities such as planning, implementation, and evaluation, you can use Moodle as a medium for managing learning activities. In this context, Webex is integrated with Moodle which forms concepts as virtual learning, where the distance learning process is a new learning framework for solving educational problems during the COVID-19 pandemic.

2 Method

Research conducted based on a qualitative descriptive approach, which examines the status of an object, conditions, systems of thought, function and perception. Because it does not use calculations in this research study. Literacy studies are also a method in gathering various sources of books, articles and journals and documents related to research. The method is a method that requires a lot of activity reading data, analysis and information that has been collected. The writing method used in the form of collecting materials in the form of theory taken from the results of the analysis obtained in the application of distance learning or e-learning that is applied by high school teachers in Java-Bali, the object of this study is the teacher and students.

3 Discussion

Distance learning can be accomplished with the presence of an LMS (Learning Management System), an e-learning platform is a software that includes various services that help teachers manage their courses [5] an application used in making the learning media process directly as software for the delivery of learning activities programs, facilities provided by the LMS also take the form of learning course management, learning material management, activity management, value management, displaying transcript values and managing display

for e-learning. In LMS, mediation involves the acquisition of competencies and communication skills of all teachers and students, and greater concern for the creation of moments of interaction and the possible practical application of collaborative work, that with the learning process occurs participative [8]. Advances in information and communication technologies offer new opportunities [9] this analysis starts with the most powerful and commonly used tools for synchronous distance e-learning [10] namely Zoom and Webex. The use of Zoom and Webex can provide convenience in the delivery of learning material during the COVID-19 pandemic, this does not rule out the possibility of using the internet in Indonesia with good distance learning conducted, based on statistical data from Hootsuite and We Are Social and the use of the internet with devices used in Indonesia.

Fig. 1. The Essential Headline Data Media Use

Fig. 2. Percentage Uses Each Kind of Device

3.1 Zoom

Zoom is a collaborative cloud-based video conferencing service offering features including online meetings, group messaging services, and secure session recording. Zoom offers the ability to communicate in real-time with individuals who are geographically dispersed via a computer, tablet or mobile device. The video conferencing application used is Zoom [11] learning activities can be done through Zoom with face to face system directly in different places. Other important security features include user-specific authentication, real-time encryption of meetings, and the ability to backup recordings to online remote server networks (“the cloud”) or local drives, which can then be shared securely for the purpose of

collaboration [9]. This learning activity can be done by teachers and students or students with students to discuss the material and assignments delivered, Zoom has a complete feature with distance learning needs.

Zoom provides certainty in the presence and participation of students in online classes conducted by the teacher, the teacher can record the implementation of learning activities carried out as evidence of the teacher's performance of teaching and learning activities. Teachers can share screens to display slide presentations or videos or files that can be seen by all students present in the online class. Chat and file sharing features are available for teachers and students so that online learning activities can be carried out properly and optimally.

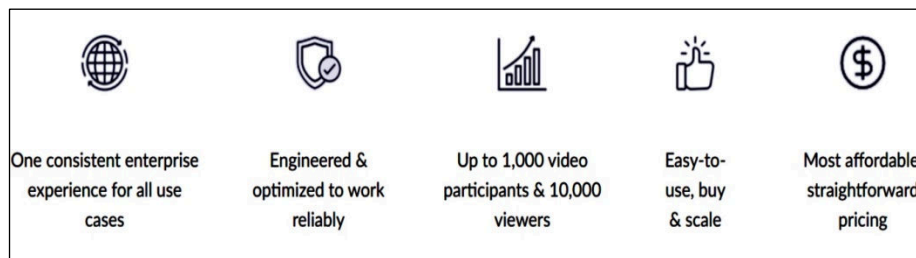

Fig. 3. Zoom Advantage

Table 1. Zoom Feature

 Meetings <small>Online Meetings, Training & Technical Support</small>	<ul style="list-style-type: none"> a. Unparalleled usability b. Join anywhere, on any device c. Video for every need 	It makes it easy to start, join, and collaborate on all devices and synchronize with calendar systems, internal and external communications
 Video Webinar <small>Marketing Events & Executive Meetings</small>	<ul style="list-style-type: none"> a. Share your story b. Easy set-up and registration c. Present with confidence 	Simple host controls for presenters and interactive abilities for participants
 Conference Rooms <small>Build Collaboration-Enabled Conference Rooms</small>	<ul style="list-style-type: none"> a. Zoom Rooms b. Conference Room Connector 	Ideal for enhancing existing meeting rooms with storage to Zoom Cloud
 Phone System <small>The next generation enterprise phone system</small>	<ul style="list-style-type: none"> a. Enterprise Cloud Phone System b. Centralized management c. Secure and reliable 	Provide and manage users quickly and centrally monitor interactions that are easy to use
 Chat <small>Cross-Platform Messaging & File Sharing</small>	<ul style="list-style-type: none"> a. Streamline your teams with chat and video meetings b. Power modern and efficient team communication c. Organize your communications chaos 	Find messages, content, and links related to conversations about meetings and collaborations

3.2 Webex

Webex is a video-conferencing application that enables online communication using personal and mobile devices such as computers, tablets or mobile devices while it is still within the reach of the internet network. Webex features interactive capabilities such as screen sharing, the ability to annotate documents and write on a virtual whiteboard, as well as the option to join meetings from a computer, smartphone, or tablet [12]. Webex has advantages that can be integrated with LMS to facilitate the use of virtual classrooms and online learning by managing activities and other activities such as planning, implementation, and evaluation. One LMS that can be used for Webex integration is Moodle-based e-learning.

The use of Webex can arrange or join classes or online meetings through cellphone or computer devices, teachers can share screens in online classes to facilitate and provide certainty in the presence and participation of students in online classes that are carried out, students can be invited as much as possible according to the needs of learning activities. Learning activities in Webex can be recorded for the needs of teaching and learning activities, as evidence of teacher performance and material for students who do not participate in online classes. With video and audio conferencing in high quality and integrated with email services such as Gmail, Outlook and Office 365.

Table 2. Webex Advantage & Features

	Started with remote education	<ul style="list-style-type: none"> a. Live class to learn b. Class to learn in education
	<ul style="list-style-type: none"> a. Learn to teach virtually b. Course content to the virtual classroom 	<ul style="list-style-type: none"> a. Virtual classroom b. Setting remote student expectations c. Managing a remote classroom culture
	Futher skills	<ul style="list-style-type: none"> a. Scheduling meeting b. Class engaged c. Class more accessible
	Integrate Webex into Learning Management System (LMS)	<ul style="list-style-type: none"> a. Take a live class to learn Webex in LMS b. Set up Webex in LMS page
	<ul style="list-style-type: none"> a. Webinars b. Webcasting c. Online learning d. Remote support 	<ul style="list-style-type: none"> a. End-to-end online events b. Record everything c. Scale reach d. Engaging, interactive online training

3.3 Zoom and Webex

Comparison of this video conferencing application, both of which provide ease of use especially for education, namely distance learning, both of which provide features that function very well for the implementation of learning during the COVID-19 pandemic. Zoom and Webex are the top two video conferencing tools that can be used to enhance distance learning activities, a detailed comparison between Zoom and Webex to choose the best option.

Table 3. Comparison Of Video Conference Applications

	<i>Zoom</i>	<i>Webex</i>
		
Participants	Up to 100 Participants	Up to 500 Participants
User Interface	Simple	Complex
Support	Online Support for free, phone for paid, Account Manager for Enterprise	Online for free, Phone Support During Business Hours up to 24-7 for Enterprise
Conferencing Features	HD Video, HD Voice, Screen Sharing, Whiteboarding	HD Video, Screen Sharing, , Whiteboarding
Web Features	Private & Group Chats, MP4 or M4A Local Recording, Host Controls, Chrome & Outlook Plug-Ins	Multimedia Content Sharing, Local Recording, Host Controls Toll-Free Dial-In
Support Integrations	Google Drive, Pardot, Dropbox, Eloqua, HubSpot, Infusionsoft & More	Microsoft Office, Google Calendar, Facebook Live & More
Security Features	Encryption and User Authentication Both Encrypt Meetings, Transmission and Storage	Security Control, Encryption and User Authentication, Both Encrypt Meetings, Transmission and Storage
Basic Price	Free – \$19.99/month	Free – \$26.95/month

4 Conclusion

The COVID-19 pandemic period requires schools to apply a learning method based on technology, communication, and information, so that distance learning can be created to reduce the impact of the spread of COVID-19. LMS can implement electronic learning or called e-learning, by creating an effective learning system during the COVID-19 pandemic, the application of distance learning with video conferencing applications is very important in learning activities by providing certainty in the presence and participation of students in online classes that implemented by the teacher. Zoom and Webex are two of the top video conferencing tools that can be used to enhance distance learning activities to create and create learning conditions for students and make it easier for teachers to provide knowledge and teaching to be better, and more perfect in the pandemic period of COVID-19.

The use of video conferencing applications can be applied in schools as an effective and efficient learning media, without being tied to places making access easier in learning that can be done at home. In the case of the development of instructional media requires human resources who can manage online learning activities and understand technology, this is related to facilities that can support the education system that applies distance learning. The use of e-learning, facilities in the form of e-learning and development can be spread evenly throughout schools in Indonesia.
